## Create an Online Virtual Tour

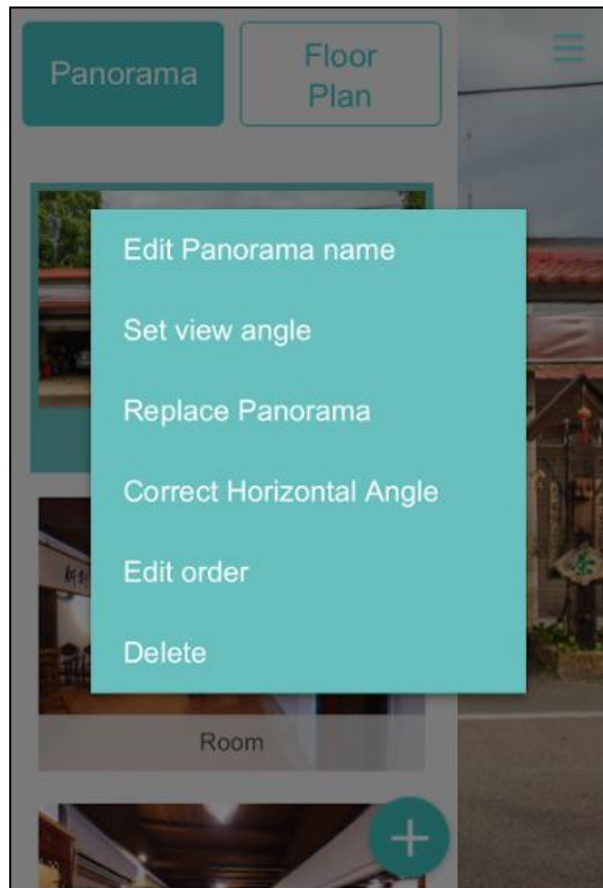

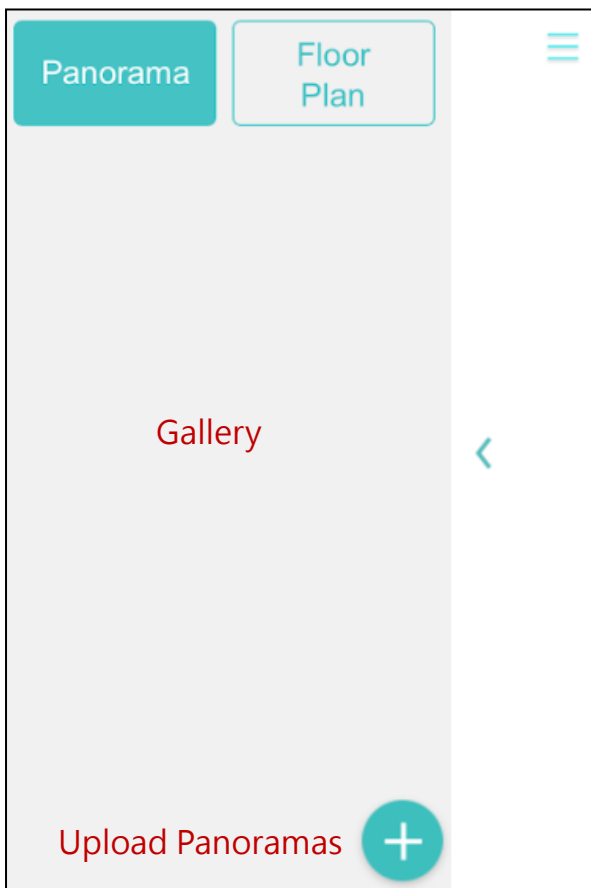

1. After login WorldCam platform, you can create the online tour on the main page. Tab the /  
 建立全景導覽 in the upper right hand corner of the screen to create an online tour and then input the details. After that, you can tab the [OK] to confirm. If you would like to delete an online tour, please tab .

Tips: You can turn on comment function, upload background music and add location when you create an online tour. Of course, you can change anytime.

Tips: Please type the address on the search bar when you add location information.

2. After the online tour is created, you will see the edit page. The left side is the panorama gallery, and the upper right side is the editing toolbar.

## Upload Panoramas

1. Please select [Panorama] at the top of the gallery   and tab on the  below to start uploading the panorama.

Tips: You can use  to close the gallery, so you use full screen to do editing.

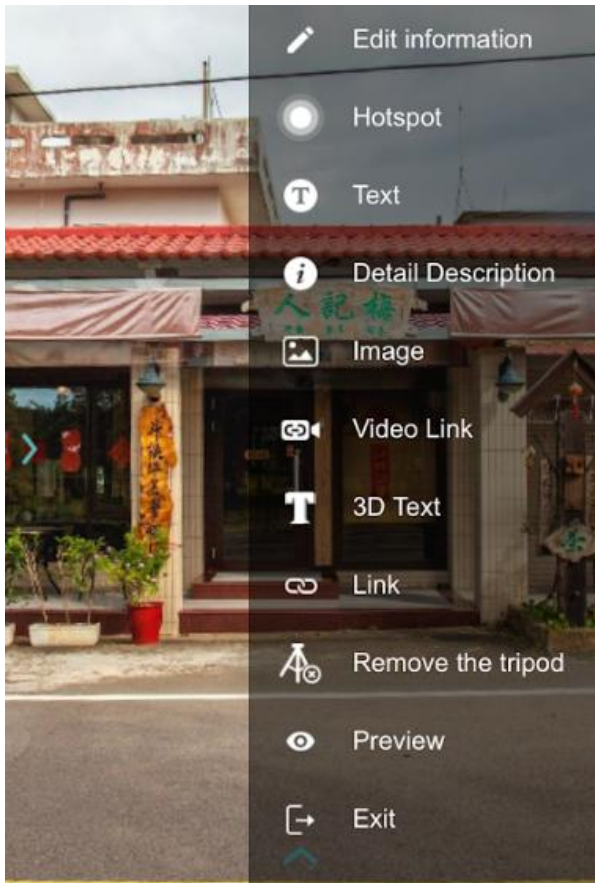

2. Each panorama should have a meaningful name as it is easy for you to manage. You can do it before uploading. Or, you can do it after uploading. You can tab the gallery's panorama to select [Edit Panorama Name].
3. Drag panoramas to change the ordering.
4. You can tab [Floor Plan]   at the top of the gallery to change Floor Plan mode. Then, tab  at the bottom to upload the floor plan. The floor plan can help the viewers to clearly know the location of each scene distribution, and provide a better user experience.
5. After uploading the floor plan image, you can adjust the blue frame on the screen, drag and drop the four borders to expand / reduce the area of the floor plan display, tab  /  button to rotate the floor plan; or tab  to expand the blue frame the most.

## Panoramas Combination

After all the panoramas have been uploaded, we recommended that you can do the linking.

1. Please confirm that you are under the [Panorama] mode. Select panorama and adjust to the right position that will build the connection. For example, drag the entrance panorama and rotate to the entrance. Then, tab  to select . You need to select a panorama that will move to.
2. A light blue dot will add on the scene, which is connection between two panoramas. Under the viewing mode, the scene is switched by tabbing this dot. Please drag the hotspot to the right position.

3. For remaining panoramas, you can repeat the step 2 to complete the linking.
4. Tab the dot to do edit or delete.

Tips : Tab  and use the arrow to fine-tune distance.

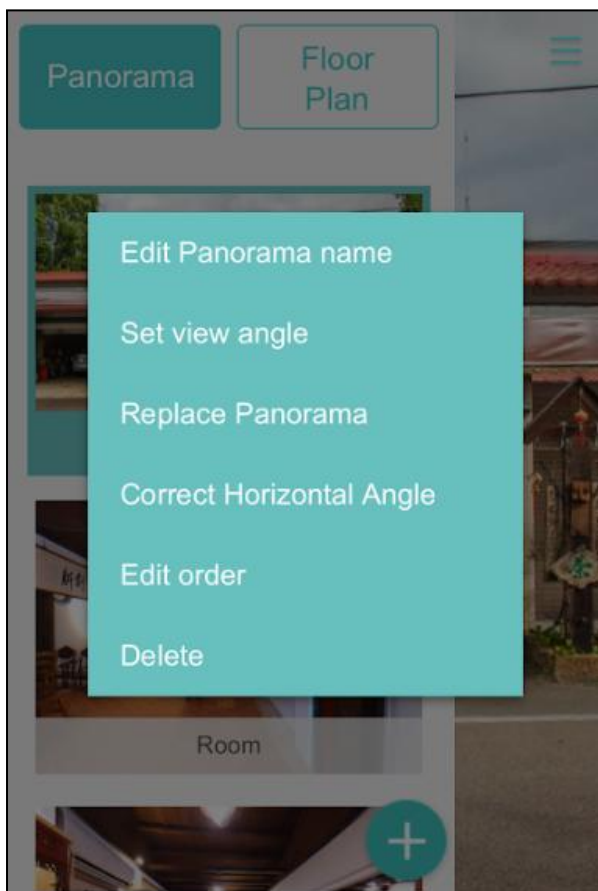

5. If you need add a floor plan, please go to the [Floor Plan] mode  . Tab  and select  to mark the position of each panorama onto the floor plan, and then drag it to the correct position.
6. After the scene has been marked on the floor plan, please tab  to confirm the direction. You can see the small floor plan in the upper left corner with a direction indicator  that indicated what direction of the scene. If the direction is wrong, please go back to the [Floor Plan] mode to do adjustment.

Tabbing the tag to select  in the upper right corner. Then use   to adjust the red direction indicator  to the correct direction and press [OK] to save it.

7. Please repeat the above steps to complete the basic panoramas combination
8. You can add background music to enrich and enhance the user experience. Please tab  and select  to upload the audio file .

## Edit the Tour

In each scene, you can insert a variety of tags, such as text, multimedia, and 3D models, to explain the scene. Before starting edit, you should set the browsing behavior for each panorama. Please select a panorama at the **Gallery** and tab the left button to open the menu.

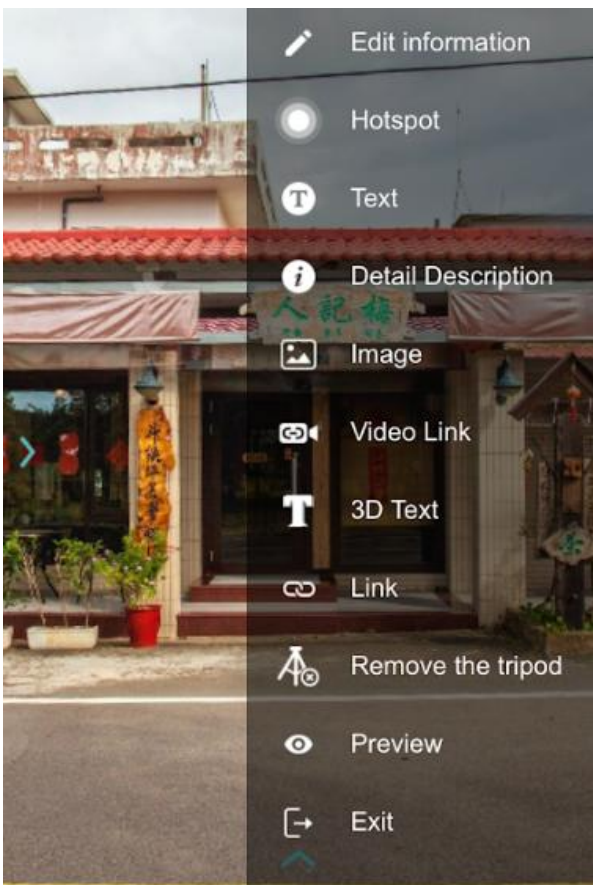

- **Set the initial viewing direction:** The initial viewing scene is the first image that viewers enter the online tour and the rotation start from here. Adjust the angle and direction that you preferred, then left tab the panorama to select [Set view angle] and save the settings.
- **Replace Panorama:** Change the current panorama.

- **Blur privacy area:** If there are sensitive information cannot show, such as car license plate or human face, you can use this feature to partially blur that section. You can drag the blur toolbar to adjust the size, and then draw on the screen.
- **Filters:** You can apply a different panorama filter effect here, or adjust the brightness and contrast of the panorama.
- **Correct Horizontal Angle:** If you find that the horizontal angle of the panorama is offset, you can use this function to make adjustments.
- **Edit order:** Change the panorama ordering.
- **Delete:** Delete this panorama.

### Add Tags in the Panorama

You can tab  to insert tags. Here are tags insert instructions:

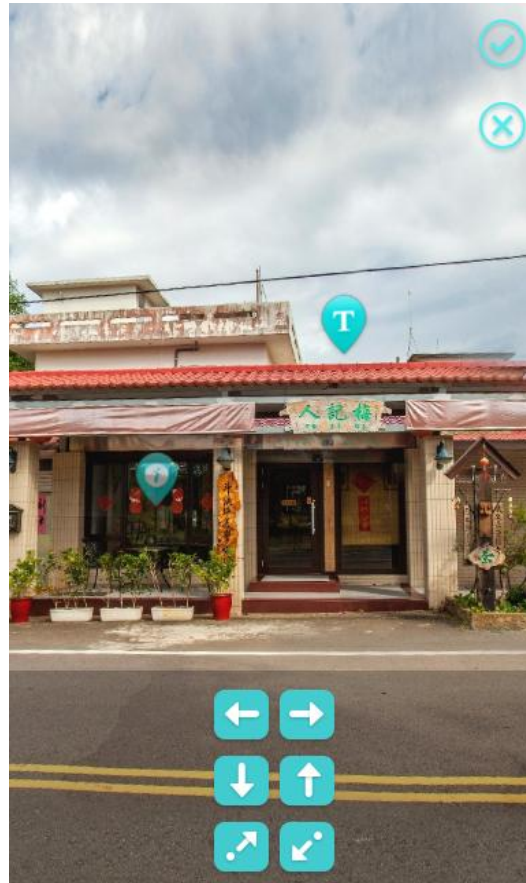

- **Add Text Description**  / **Detail Description** : You can insert text or multimedia content to introduce the special sceneries of the scene. For example, you can add the tag to mark the monument with the history description in the memorial park. Please drag the tags to the correct position. You can right tab the tag to edit the information, or delete it.

### Tips:

**Tips:**

1. Tab  to edit the content.
2. Tab  to delete tag.
3. Tab  and use the arrow to fine-tune distance.
4. Tab other space, back to non-editing mode.

- **Add Tripod Logo** : Normally, there is a tripod trace left on the panorama bottom because we will use a tripod to fix the camera. You can insert a logo to cover it to make the panorama looks better. You can upload two extra icons as logo. Please note the extra images will be only used in this tour.

### Tips:

1. Tab  to edit tripod logo.
2. Tab  to delete tripod logo.
3. Tab  to adjust the scale the logo.
4. Tab  and use the arrow to fine-tune distance.
5. Tab Apply All to apply selected image to all panorama.
6. Tab Delete All to delete all image from all panorama.
7. Tab other space, back to non-editing mode.

- **Add Panorama Video** : You can insert panorama video in the panorama. Before uploading the video, you should preview it and decide the initial viewing angle. Under the viewing mode, panorama video will be played first if the panorama has it.
- **Preview** : Preview current online tour.
- **Exit** : Back to main page.

Tips: You cannot import the 3D model under mobile editing mode, but you can edit existing 3D model.

1. Tab  to edit 3D model.
2. Tab  to delete 3D model.
3. Tab  to rotate 3D model. Using  to do horizontal rotation. Using  to do vertical rotation. Using  to do depth rotation.
4. Tab  to adjust the scale.
5. Tab  and use the arrow to fine-tune distance
6. Tab other space, back to non-editing mode ◦
